WAYNE HELIX™ FUEL DISPENSERS, NA

Fast track to excellence

An abstract digital background featuring a dark space filled with glowing particle trails that sweep across the frame. In the lower-left area, a white wireframe cube is visible, appearing to be composed of or interacting with the particles. A bright starburst light source is located in the upper-right quadrant, casting a soft glow.

Join the evolution

Harnessing the power of data and information technology has forever changed the way we run our fuel operations. Through embracing this evolution, we have become more streamlined and efficient with a greater focus on the customer experience. The Wayne Helix fuel dispenser range is synonymous with technology and innovation and can drive your business into the future.

Using state-of-the-art, field-proven, technologically-advanced components, Wayne Helix dispensers represent the very best that Dover Fueling Solutions has to offer. Delivering outstanding performance, unparalleled reliability and high precision, these dispensers have been engineered to revolutionize not only your forecourt, but the fueling industry.

1 The fuel dispenser: redesigned & reconceived

Designed and engineered on a single global platform, Wayne Helix dispensers emphasize intelligent design, advanced technology, safety and security.

2 Intelligent design

Feedback from distributors, retailers, motorists and technicians across the globe helped to influence the function, ownership and serviceability of this intelligently-designed dispenser.

3 Adaptable for any situation

From basic non-payment configurations all the way up to the most advanced technology packaged in an eight-hose dispenser, the Helix fuel dispenser family covers all of your business needs.

4 Easier serviceability

The new swing door provides direct access to lower electronic components to service when necessary, whilst the option panels make it quick and easy to upgrade the dispenser with new payment components over time.

The choice is yours

The NA Wayne Helix dispenser models are highly configurable, addressing the specific needs of users no matter their fueling demands. Choose from two, expertly engineered dispensers and transform your forecourt.

Wayne Helix 4000™ fuel dispenser

Big Player, Small Profile

The Helix 4000 is built with up to four nozzles and has the ability to dispense five fuel grades, with the hose retraction option providing ample reach for easy refueling. This model is ideal for sites requiring a smaller dispenser footprint, without limiting the customer's refueling options. As with the Helix 5000, the Helix 4000 dispenser is perfect for remote dispensing applications and for forecourts requiring suction pumps within the dispenser unit.

Wayne Helix 5000™ fuel dispenser

Core of Flexibility

The redesigned Helix 5000 fuel dispenser is a versatile, durable workhorse for your forecourt and is now available with the flexible, multi-hose blender configuration direct from the factory, with up to six buttons per side. The Helix 5000 dispenser is well adapted for use in remote dispensing applications, as well as for sites that require suction pumps within the dispenser itself. No matter the application, this flexible and dependable model is a great option to fit a variety of forecourt fueling needs.

Industry-leading features that reflect the very best of Wayne

INTELLIGENT DESIGN

Separation of “clean” and “dirty” areas — Helps keep hoses, dirt and fuel away from the user interface, drawing users’ attention to the branded areas and payment terminal

Slim, attention-getting profile — Openness from the side and a streamlined, refined profile are appealing to customers and give station attendants a better view of the forecourt

Large-panel hydraulic cabinet doors and valances — Provides uninterrupted branding space to boost merchandising real estate

Weld-free exterior and framework — Reduces catalyst points for corrosion, helping to lower maintenance costs and maintaining the appearance of the dispenser

Compact footprint — Installs over existing Wayne footprints and most sumps, helping to simplify installation and reduce retrofit costs

SAFETY & SECURITY

EMV® compliance and upgradeability — Provides full compliance with global EMV payment security standards as well as easily upgradable EMV-ready options

Enhanced visibility — Promotes assurance of personal security through improved visibility over, around and through the pump

Wayne iX™ Technology Platform — Built on a single, global technology platform, enabling configuration flexibility that easily meets specific regional requirements

USER INTERFACE

Intuitive user interface (UI) and large, bright display digits — Features angled unit price displays above the push-to-start buttons and white-on-black digits for clarity in outdoor environments, providing easier reading, day and night
